High levels of dietary fluoride cause fluorosis (bone disease) and mottling of teeth. High levels of fluoride cause dental lesions, periosteal hyperostosis, calcification of ligaments, and lameness. Crippling fluorosis in human is observed in persons exposed to very high intake (>20 mg/day) over a period of several years. Acute toxicity of fluoride is very rare and can occur due to a single ...

Introduction. The interest in environmentally friendly, non-toxic and degradable yet potent biocides has never been so high. Oxidizing agents, notably hydrogen peroxide (H₂O₂), are increasingly used in a number of medical, food and industrial applications but also in environmental ones such as water treatment. In the medical arena, oxidizing agents are particularly useful for hard surface ...
